- MAGNETIC HALL - EFFECT SENSORS**

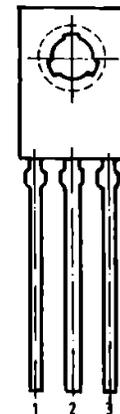

The  $\beta$ SM 231,  $\beta$ SM 232,  $\beta$ SM 233 and  $\beta$ SM 234 are three pins magnetic Hall - effect sensors, special designed for computer keyboards. The sensor has a TTL compatible open collector output, that switches in Low state in the presence of a magnetic field. The  $\beta$ SM 230 IC series use the same chip, but have some different electro - magnetical performances.

The  $\beta$ SM 230 series is not recommended for extended temperature range.

**Features**

- Operating temperature .....		0 ...	+70 °C
- Supply voltage .....	$\beta$ SM 231, $\beta$ SM 232 ...	4.5 ...	+25 V
	$\beta$ SM 233, $\beta$ SM 234 ...	4.5 ...	10 V
- Supply current .....	$\beta$ SM 231, $\beta$ SM 232 ...	max.	6.5 mA
	$\beta$ SM 233, $\beta$ SM 234 ...	max.	10 mA
- Low level output voltage :			
	$\beta$ SM 231, $\beta$ SM 232 at 40 mA ...	max.	500 mV
	$\beta$ SM 233, $\beta$ SM 234 at 16 mA ...	max.	500 mV
- "ON STATE" magnetic field :			
	$\beta$ SM 231, $\beta$ SM 233 ...	min.	30 mT
	$\beta$ SM 232 ...	min.	30 mT
	$\beta$ SM 234 ...	min.	70 mT

1. Supply voltage
2. GND
3. Output

PACKAGE SOT-32 / FRONT VIEW

# Not recommended for new design
